Fill-in of the product, n = 1024
density of the product C (% non-zero)
density of the inputs (% non-zero)
10^{2}
10^{1}
10^{0}
10^{-1}
10^{-1}
10^{0}
10^{1}
10^{2}
uniform random: observed density of C
model $1-(1-d^2)^n$ (independent positions)
banded: observed density of C
density of C = density of A
